# Experiment with Unicode characters in xml2rfc

---

## Abstract

This draft is an experiment to explore what happens when various Unicode characters are on an Internet-Draft and how xml2rfc handles that.

## Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on 8 September 2023.

## 1. Introduction

Non-ASCII characters are allowed in RFCs under several restrictions. See [[RFC7997](#)].

Some XML2RFC elements allow the use of bare Unicode and other elements can make use of >u< element. See [[RFC7991](#)].

Various non-Latin Unicode characters can be an issue in RFC publications. Especially generating PDF format of the document. This is because the correct font has to be identified and included in the PDF file. This is done by the xml2rfc too. See [[xml2rfc](#)].

xml2rfc maintains its own list of Unicode script blocks. Depending on which script is used, xml2rfc matches the correct Noto font.

This document is an experiment on when Unicode characters from different blocks are included in an Internet-Draft.

## 2. Methodology

The Unicode characters blocks are identified using [[blocks](#)].

The xml2rfc is used as an API to identify which script blocks are assigned to that character and predicted font names for set of characters from each Unicode code block. The xml2rfc might predict a non-existing font. These are the instances where xml2rfc might leak non-standard fonts to generated PDF files.

## 3. Scripts

This section covers Unicode scripts as defined in [[charts](#)].

### 3.1. European Scripts

#### 3.1.1. Armenian

Unicode character range: U+0530..U+058F
